Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include<stdio.h>
int main()
{
    int n,x;
    scanf("%d",&n);
    int arr[n];
    for(int i=0;i<n;i++)
    {
        scanf("%d",&arr[i]);
    }
    scanf("%d",&x);
    int low=0, high=n-1;
    int floorValue=-1;
    while(low<=high)
    {
        int mid=low+(high-low)/2;
        if(arr[mid]==x)
        {
            floorValue=arr[mid];
            break;
        }
        else if(arr[mid]<x)
        {
            floorValue=arr[mid];
            low=mid+1;
        }
        else
        {
            high=mid-1;
        }
    }
    printf("%d",floorValue);
}
```

	Input	Expected	Got
