Question 1 | Correct Mark 1.00 out of 1.00

Given an array A of sorted integers and another non negative integer k, find if there exists 2 indices i and j such that A[j] - A[i] = k, i != j.

Input Format:

First Line n - Number of elements in an array

Next n Lines - N elements in the array

k - Non - Negative Integer

Output Format:

1 - If pair exists

0 - If no pair exists

Explanation for the given Sample Testcase:

YES as 5 - 1 = 4

So Return 1.

For example:

Input	Result
3 1 3 5 4	1

Answer: (penalty regime: 0 %)

int main()
{
    int n;
    scanf("%d",&n);
    int arr[n];
    for(int i=0;i<n;i++)
    {
        scanf("%d",&arr[i]);
    }
    int x;
    scanf("%d",&x);
    int i=0,j=1;
    int found=0;
    while(i<n && j<n)
    {
        if(i!=j && (arr[j]-arr[i]==x))
        {
            found=1;
            break;
        }
        else if(arr[j]-arr[i]<x)
        {
            j++;
        }
        else
        {
            i++;
        }
    }
